

MAKE THE WORLD BETTER WITH SUPPLY CHAIN INNOVATION
MAKE YOUR CAREER BETTER WITH A MORE VALUABLE SKILL SET

Amazon Supply Chain Systems Design Fellowship

Companies face a daunting challenge in the coming years and decades. Changes in customer expectations, availability of emerging technology, and extended global business activities make operations incredibly complex. Understanding how to design and manage complex logistics facilities and global supply chains is a key skill in virtually every industry.

Amazon, a leader in supply chain innovation, recognizes the need for these skills and the importance of developing a demographically diverse leadership team. In order to attract young professionals, Amazon has established the **Amazon Supply Chain Systems Design Fellowship** program. Fellowship recipients are admitted to the **Georgia Tech Master of Science in Supply Chain Engineering (MSSCE)** program - Supply Chain Systems Design Track, receive \$12,000 toward program tuition and fees, can potentially work directly with Amazon executives in a paid semester-long internship which counts toward degree completion and provides useful real-world experience, and are well-positioned for full-time post degree employment with Amazon.

The **GT MSSCE** Program is focused on supply chain design and management. Combining substantial applied learning, along with course work in optimization, design, and supply chain and business domains, the GT MSSCE program gives its students the skill set required to be successful in this growing field. GT MSSCE is an offering of the #1 ranked Stewart School of Industrial & Systems Engineering.

- » **To be considered for the Amazon Supply Chain Systems Design Fellowship or for more information, visit <https://www.scl.gatech.edu/AmazonFellow>.** Females and under-represented minorities are encouraged to apply.
- » Visit <https://www.isye.gatech.edu/mssce> to learn more about the MSSCE degree program.
